EDUCATION

Aston University — 2021 - 2026

BSc Business, Computing & IT - Grade: 2:1

Relevant modules: Business Analysis & Data Mining, Software for Analytics, Optimisation & Decision Analytics

- *Built an end-to-end exploratory data analysis project in Python, covering data cleaning, missing values, visualisation, chi-square and t-tests, and linear regression.*

Mill Hill County High School — 2019 - 2021

A-Levels: Business (A), History (A), Psychology (B)

PROFESSIONAL EXPERIENCE

CST Technology - Freelance Junior Software Engineer — Sep 2026 - Present

- Built a Python tool that pulls crypto asset records and wallet addresses from a third-party data API for a UAE government client's crypto-regulation platform, replacing manual searches and saving ~3 hours a week.
- Integrated an AI chatbot (DeepSeek API, TypeScript) into two client platforms as part of a 10-person engineering team, and demoed the live Arabic-to-English transcription product to clients.
- Compared 5 off-the-shelf CRM platforms on cost and fit; my findings led the CEO to build in-house, and I'm now building the app shell (sidebar navigation, a route per section) and the server-side permissions that control which sections each team member can access.

Inchcape - Regional Finance Intern — Jun - Sep 2026

- Helped prepare a £1m GBP/USD forward on Bloomberg Terminal, analysing entry timing to hedge the group against adverse exchange-rate moves; supported the treasury team's day-to-day liquidity management.
- Built and reviewed cash-flow forecasts, valuations and models presented to senior executives for the c.£300m acquisition of a Bulgarian subsidiary, then supported post-acquisition integration.
- Reconciled financial data across 10 European and African subsidiaries in SAP and BPC, catching and resolving inconsistencies before month-end close and group consolidation.
- Automated the monthly selection of 100 participants for the company-wide "CoffeeChats" scheme with Excel VBA, saving 2–4 hours of manual work each month.

Heritage Oil (UK) - Intern — Jun - Aug 2024

- Presented project economics to high-net-worth investors in an upstream oil joint-venture pitch that raised $18m; selected by the CEO to attend a strategic joint-venture meeting.
- Built project viability and cash-flow analysis for a live capital raise, contributing to the investment thesis put to investors.
- Researched energy commodity markets, assessing how regulatory changes and macro trends fed through to project viability.

PROJECTS

Heritage Edge - Founder — Ongoing

- Built and run a markets research site where every trade idea is written up the same way: thesis, trade construction and risk, code, and result.
- **FX:** Backtested a false-breakout strategy on EURUSD, testing 96 parameter sets on two years of data and then blind on a third; documented why the edge failed out of sample and designed a better test.
- **Commodities:** Extending my Citi Markets job simulation, priced a six-month coffee call three ways (cost of carry, Black-76, 500,000-path Monte Carlo), agreeing to within 0.02%, and structured a coffee-linked note solved at 40.9% participation.
- **Rates:** Wrote a pre-FOMC trade memo putting a December Fed hold at ~30% against ~10% market-implied, expressed as a SOFR futures options spread with $750 maximum loss and 1 : 3.2 risk to reward.

SKILLS

- **Programming:** Python, TypeScript, SQL, Excel VBA
- **Data, APIs & AI:** REST API integration, LLM chatbot integration, exploratory data analysis, hypothesis testing, linear regression, Power BI, Chart.js, Git/GitHub
- **Finance & Markets:** FX forwards and hedging, credit risk (probability of default), cash-flow modelling, DCF valuation, forecasting, month-end reporting, commodities
- **Systems:** Bloomberg Terminal, SAP, BPC, Microsoft Office

ADDITIONAL INFORMATION

- **Football:** Played football professionally before university for Watford FC
- **Built my own business at university:** DJing and tutoring, finding my own clients and managing my own bookings; still DJ at lounge and restaurant events in London.
- **Markets Community:** Lead an FX trading education group of 4 members, running weekly sessions on how currency markets move around central bank decisions and data releases.
- **Interests:** Arsenal, and watches, including exploring the luxury watch resale market.
